

# TSL Wireless Alarm Control Unit

Test - Silence - Locate - Memory

The TSL alarm control unit allows individuals to **test interlinked alarms, without the need to physically press each alarm.**

**Increases accessibility** for those who are unable to easily test or access alarms e.g. vulnerable adults or disabled.

**A remote interface** between up to 49 other Smart RF products in the FireAngel range.

By using a TSL alarm control unit, **testing multiple alarms becomes simple and fast.**

We recognise **testing** or **silencing alarms** isn't easy for everyone...

- The TSL alarm control unit helps assist the elderly, disabled or those living in properties with high ceilings.
- Suitable for anyone who wishes to test each of their alarms across several different rooms.

## WTSL-SN-1

Wireless TSL Alarm Control Unit

- **Test button** – Test all interlinked alarms from one centralised location
- **Silence button** – Silence all interlinked smoke, heat and CO alarms
